

PeterStar
Information letter

As part of the collaboration with GMCS PeterStar carried out the following projects:

In 2006 GMCS was invited to reform and develop the project for the implementation of the Microsoft Dynamics Axapta software product, earlier conducted by another company. The project was initiated in March 2006, and launched into pilot operation in November 2006.

As of January 2007 GMCS provides services on technical maintenance of this system, as well as various consultations as part of training and project development.

In 2007, together with GMCS a project was started for the automation of payroll and personnel modules using the BOSS-Kadrovik system. At the moment this project is completed in terms of the operational module and works are continuing on the automation of the Personnel Management processes.

We are glad that we found such a stable and ambitious company that is GMCS, which carries out projects with proper quality and in due time. We hope that our cooperation will continue in future.

A.P. Fedotov, Head of IT Department, PeterStar
