To E. N. Voropaeva,
President of GMCS VerEx, LLC
From R. V. Gotov,
IT Director, National Satellite Company CJSC

Information letter

National Satellite Company CJSC (Tricolor TV) expresses its gratitude to GMCS VerEx, LLC (subsidiary of MAYKOR) for successfully implementing the automated system for card and PIN code tracking and planning based on Microsoft Dynamics AX 2012 R3 in 2014.

Thanks to the well-coordinated and professional work of GMCS VerEx specialists, the project was completed in a short time frame. Our company was able to evaluate the benefits of Microsoft Dynamics AX 2012 R3, being one of the first users of this cutting-edge platform in Russia. Given that our business volume is shaped by millions of subscribers and dozens of partners, we chose Microsoft Dynamics AX 2012 R3 as the optimal product in terms of flexibility, speed, and ease of operation. The solution for tracking the availability and circulation of cards, provided by GMCS VerEx, enabled us to fulfill all project tasks.

Currently, the automated system of card and PIN code tracking and planning is in the operation stage. The outcome of system implementation was the optimization of planning processes for smart card and scratch card procurement with regard to stock remainder at the storage facilities of National Satellite Company CJSC and its distributors, which resulted in reduced costs for card production and purchasing. The system gives us the ability to track the entire process, beginning with card arrival from the manufacturer to its purchase and activation by a subscriber, as well as the ability to monitor returns and receive the necessary reports.

National Satellite Company CJSC values its cooperation with GMCS VerEx and recommends it as a trusted partner in the deployment of information management systems.

2/5/2015
