To Whom It May Concern,

"Leroy Merlin Vostok" has been cooperating with GMCS (a subsidiary of MAYKOR) on several IT projects since 2015.

In 2015, we attracted GMCS for a project of integrated price monitoring system and calculation of new price proposals. For the implementation of this strategically important project, we were looking for a reliable and professional IT Company in the local market, GMCS demonstrated a high level of professionalism and carried out the tasks exactly as we needed.

The solution allows us to collect and process data from catalogs of products and prices, to accumulate this information and use it to calculate the best price proposals, as well as to make a specific calculation for each city, where Leroy Merlin is located. Users are able to work with a desktop and a mobile application. In accordance with the corporate standards, the solution supports three languages: Russian, French and English.

We have decided to continue our cooperation with GMCS for developing a solution for online price monitoring. The development is carried out according to our specifications and in close cooperation with the Russian office of Leroy Merlin.

We appreciate and value our successful cooperation with GMCS.

Sincerely, *Antoine Molle*,
Director of IT Department, Leroy Merlin Vostok
